Summary: This fall produced a good variety of birds (231 species) with a number of rarities. A **Red Phalarope** (3rd SBA record) stayed for 4 days on the Dow Ponds, but remained steadfastedly in the middle of the pond. A **Western Kingbird** appeared fleetingly at Freeland SL for the 5th SBA record. The 3rd SBA **Lesser Black-backed Gull** was far more more obliging and could be found with regularity on a sand spit at Bay City State Park. A **Snowy Egret** put in an appearance at the Karn Plant, up to 3 **Eared Grebes** were continually present on the Dow Ponds and shorebirds were represented by an **Avocet** and both **Godwits**.

Huron County excelled itself with a surprising 7 **Ravens** – a very unusual record. In addition, a **Golden Eagle** and early **Pine Grosbeaks** and **Red Crossbills** were also found there, as well as a pair of nesting **Mockingbirds**. **Carolina Wrens** may also have nested in Midland County. Tawas continues to demonstrate that scoters and grebes are regular in good numbers there in the fall. The number of raptors keeps improving with a good showing of **Ospreys**, **Bald Eagles** and a sprinkling of **Rough-legged Hawks**.
